TRUBIQUITY

End-to-end management of electronic data interchange and supply chain integration for the retail industry.

TRUedx Retail Gives You The Competitive Edge.

To be successful in the retail industry has always meant to be faster, more reliable and more accurate than one's competitors. Hence it is no wonder that - today more than ever - Electronic Data Interchange (EDI) is first choice for companies wishing to stay ahead of their competition. EDI drives cost savings, increases efficiency and facilitates and speeds transactions with the global supply chain. Besides, virtually all large retailers require their trading partners to implement EDI procedures.

Trubiquity's TRUedx meets all of the retail industry's specific requirements and ensures trouble-free EDI communication with all business partners around the globe, including customers, suppliers, pre-suppliers, logistics service providers, field service and buying agents. The scalable solution offers a complete range of EDI services: from small suppliers leveraging cost-efficient webEDI capabilities to large retailers employing a full outsourcing service including roll-out to suppliers, TRUedx is equally suited for companies of all sizes.

Drawing on more than 20 years of EDI and industry expertise, Trubiquity customers enjoy support for all important concepts and workflows in the retail business - no matter if a business partner requires you to support Stock Keeping Unit (SKU), Universal Product Code (UPC) / Global Trade Item Number (GTIN), Style Number, Score Carding, EAN/UCC-128 Labels, VIC's Bill of Lading, RFID or cross-docking, TRUedx provides for that and much more.

In fact, the TRUedx solution line comes with numerous connectivity options, ERP interfaces and monitoring/tracking features and supports all message types commonly used in the retail industry, the chart on the next page offers a list of these message types.
