TRUBIQUITY

Consolidated automated product design data exchange and communication.

ARE YOU LOOKING TO:

- ▶ Eliminate manual steps in your data exchange process, making it more efficient?
- ▶ Combine all your data exchange protocols into one easy-to-use application?
- ▶ Ensure that product design data is continuously up-to-date for efficient collaboration?
- ▶ Control and monitor the distribution of sensitive product design data?

Recognizing the need for efficiency in product development.

For product manufacturers and their suppliers, reliable and efficient exchange of product design data is crucial. However, for most organizations, data exchange initiatives require a significant amount of time, resources and expertise. Various data exchange methods (OFTP/ENGDAT, FTP, CD/DVD, email, etc.) exist and multiple tools are needed to manage them.

To overcome these challenges, organizations frequently employ resource-intensive manual processes and a variety of software applications and systems. Within the automotive industry alone, analysts predict \$1.4 billion in annual waste due to disparate product data management procedures and practices. Today's fragmented data exchange solutions also do not provide end-to-end data traceability and security, compromising an organization's most valuable assets—its intellectual property.

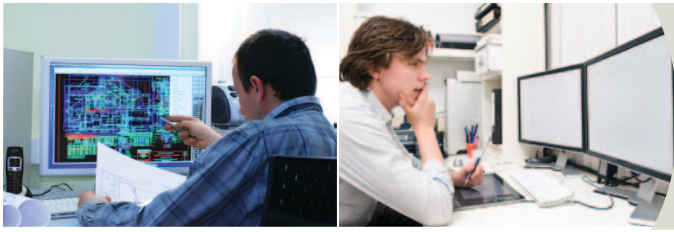

Ensuring efficient and collaborative data management across the globe.

TRUfusion Connect provides a single tool for the importing, exporting, and transporting of product design data—improving efficiency, data quality, security and traceability across all product design activities. Leveraging

industry-standards like TRUexchange, OFTP, OFTP2 and ENGDAT, TRUfusion Connect allows global data exchange across all trading partners regardless of their location or data exchange requirements.

By simplifying data exchange across the product design lifecycle, TRUfusion Connect solutions ensure that organizations design quality products, foster innovation and eliminate costs to decrease time-to-market and stay ahead of competition.

TRUBIQUITY

Consolidated automated product design data exchange and communication.

COMPELLING BENEFITS

- ▶ Deploy a single tool for all data exchange protocols including TRUexchange, OFTP, OFTP2, FTP and email
- ▶ Eliminate manual data exchange tasks by leveraging a single communication tool
- ▶ Establish bi-directional global communication with partners across disparate protocols
- ▶ Speed decision making by making the right data available to the right users at the right time
- ▶ Protect critical intellectual property through user authentication, authorization and encryption
- ▶ Leverage a scalable solution able to meet the needs of small suppliers and large OEMs

Offering unsurpassed security for your enterprise.

As organizations look to exchange a larger, more complex volume of product design data with partners across the globe, security becomes paramount. TRUfusion Connect enables organizations to store details on all data exchange activities (recipient, sender, native CAD format, conversion details, etc.)—allowing for complete tracking and visibility across product design. Sophisticated access controls ensure that users only have access to the data and the partners they have been assigned.

Providing a flexible, scalable architecture.

TRUfusion Connect is suitable for small and medium-sized organizations but is also ideal for large, distributed enterprises. Users can be located anywhere while data processing and transfer, in addition to all system administration, can occur in a separate location. As your data exchange requirements increase, additional functionality can be added to TRUfusion Connect by upgrading to TRUfusion Enterprise edition. TRUfusion Enterprise provides integrations to all the major PLM and CAD system and provides the capability to automate complex processes.

Connect, move and share your key business information. Trubiquity.

Trubiquity helps its customers achieve competitive advantages by delivering managed file transfer (MFT) and business process integration solutions across multiple enterprise boundaries. Thousands of companies in many countries worldwide use Trubiquity enterprise and SaaS solutions to connect, move and share key business information to ensure decisions are made quickly, efficiently and correctly, while maintaining control, quality assurance and intellectual property security.
