TRUBIQUITY

Managed file transfer and workflow automation.

ARE YOU LOOKING TO:

- ▶ Automate product design across employees, customers and partners in multiple geographies?
- ▶ Enable or speed the exchange of large, complex files residing in CAD, PDM and PLM systems?
- ▶ Connect disparate tools for viewing, translating, sharing and reporting on engineering data?
- ▶ Ensure that product design data is continuously up-to-date for efficient collaboration?
- ▶ Control and monitor the distribution of sensitive product design data?

Recognizing the need for efficiency in product development.

Organizations often rely upon multiple sites, partners and suppliers to execute product development initiatives. These disparate business units need to exchange and manage immense volumes of sensitive product data, all while ensuring that product designs are up-to-date and in the correct form for global collaboration. This further complicates data exchange and management initiatives in a wide spectrum of regional standards, protocols and storage locations.

Ensuring efficient and collaborative data management across the globe.

To overcome these challenges, organizations frequently employ resource-intensive manual processes and a variety of software applications and systems. Within the automotive industry alone, analysts predict \$1.4 billion in annual waste due to disparate product data management procedures and practices. Today's fragmented data exchange solutions also do not provide end-to-end data traceability and security, compromising an organization's most valuable assets—its intellectual property.

TRUfusion is a configurable solution for manufacturing organizations to automate, control and manage data exchange and collaboration activities. Combined with the TRUexchange solution line, TRUfusion provides global data exchange capabilities among trading partners, regardless of network connection or data authoring requirements, while seamlessly integrating PLM and CAD data stores.

TRUfusion™

Enterprise

TRUBIQUITY

Managed file transfer and workflow automation.

COMPELLING BENEFITS

- ▶ Enable anytime, anywhere connectivity and collaboration on product design initiatives
- ▶ Increase the security, visibility and traceability of important product design assets
- ▶ Eliminate costs and risks associated with importing, exporting and transporting design data
- ▶ Extend the value of data stored in existing enterprise systems—CAD, PDM, PLM
- ▶ Ensure data quality, standardization and compliance throughout all product design activities

COMPREHENSIVE FEATURES

- ▶ PDM, CAD, translator and viewer integration—collaboration across all standard systems
- ▶ Configurable libraries ensure that data is available, up-to-date and secure across business partners
- ▶ Automated partner profiling to manage data exchange preferences and requirements
- ▶ Robust user authentication and management models for security and compliance
- ▶ Comprehensive transaction logging, real-time dashboards and reports. Flexible implementation options—hosted and enterprise configurations available

Connect, move and share your key business information. Trubiquity.

Trubiquity helps its customers achieve competitive advantages by delivering managed file transfer (MFT) and business process integration solutions across multiple enterprise boundaries. Thousands of companies in many countries worldwide use Trubiquity enterprise and SaaS solutions to connect, move and share key business information to ensure decisions are made quickly, efficiently and correctly, while maintaining control, quality assurance and intellectual property security.

To find out more about the TRUfusion solution line or other Trubiquity process automation solutions, visit www.trubiquity.com. We look forward to helping you achieve your business potential.

Managing your large file exchange.
